DUFRANE NUCLEAR SHIELDING DESIGN: MODULAR/REUSABLE/COST EFFECTIVE

BALL & SOCKET WATER SHIELD

Ball and Socket Shields are designed to allow multiple shield configurations as a result of their semi-circular end profile. The individual modules may be positioned to create a continuous straight wall or abutted at angles of up to forty-five degrees. Streaming at the interface of each module is eliminated by design. Each module is mechanically secured to its adjacent unit with a flip-down position guide and quick release pin. Water Shields may be equipped with outrigger legs to assure greater stability in high traffic areas.

Modular Water Shields are designed to accommodate your specified profiles and size requirements. They feature a stainless steel or painted carbon steel box construction with fill, vent, and drain options as well as a visual water level indicator. They are easily moveable when empty.

DUFRANE will work closely with you, your site ALARA coordinator, and your engineering team to assure the best design for each application. At the time you anticipate the need for a Ball and Socket Water Shield, please initiate a discussion with us.
