DUFRANE NUCLEAR SHIELDING DESIGN:

MODULAR/REUSABLE/COST EFFECTIVE

LINER CENTERING GUIDE

A NEW TOOL TO AID ON-SITE STORAGE OPERATIONS

The Liner Centering Guide is designed to be utilized in conjunction with the **Dufrane, Secure Environmental Container™ (SECT™)**, during loading operations for temporary or long term on-site storage. The Guide rests on the stepped top surface of the SEC Body. Due to its funnel shape, the Guide provides a radial offset which will direct the High Integrity Container (HIC) safely into the SEC under remote or severe weather conditions.

The material of construction is 3/8" thick, 300 series stainless steel with a bead blasted finish. Six radial legs extend to the outside diameter of the SEC and include set down pads with neoprene gasket material to protect the concrete. Six additional gussets will provide increased stability. A three legged sling is provided for placement on or removal from the Secure Environmental Container.

Dufrane will work closely with you, your site ALARA Coordinator, and your engineering group to assure the best design for each application. At the time you anticipate the need for a Liner Centering Guide, please initiate a discussion with us.
